SUMMARY

Motivated and detail-oriented front-end Developer with hands-on experience in building modern web and mobile applications. Skilled in React, Flutter, Next.js, Python, Ci/Cd, Git and cloud technologies like AWS . Strong background in DevOps , system architecture, UI/UX design and develop apps end-to-end from concept to deployment, known for rapid learning, problem-solving, and working well under pressure. Looking to contribute to a dynamic team and deliver innovative, scalable solutions.

WORK EXPERIENCE

Website developer - Morevision

Feb 2024 - Dec 2024

- Designed, developed, and maintained client websites using WordPress, PHP, CSS, HTML, and JavaScript.
- Collaborated within a development team to improve performance and drive projects forward efficiently within strict timelines.
- Independently resolved programming and operational issues while coordinating with designers and marketing professionals to ensure seamless execution and delivery.
- Focused on building responsive, SEO-friendly websites aligned with modern web standards.

IT Coordinator – Central Elections Committee

Mar 2025 - Now

- Responsible for on-site IT coordination and technical support for national election committee project.
- Provided first-line troubleshooting and technical assistance for hardware, software, and networking issues.
- Installed, configured, and maintained system to ensure smooth operation throughout the election project process.
- Worked closely with local staff and regional IT managers to ensure proper system functionality, user access, and data integrity.
- Played a key role in onboarding, training, and guiding users in the use of election-related platforms and tools.

KEY PROJECTS

Motiv – Fitness & Quiz Tracking App

A cross-platform mobile app built for physical Education Coordinator at the Ministry of Education, designed to encourage student activity and engagement through real-time fitness tracking and educational quizzes. Led the full frontend development using Flutter, with advanced state management via Riverpod, responsive layouts, and dynamic UI components. Integrated native and platform-specific adaptations using Xcode for iOS deployment. Communicated with backend services via REST APIs ,nowadays responsible for ongoing app maintenance, bug fixing, and performance optimization across Android and iOS platforms , the app available in apps stores .

Chipi – Hebrew AI Chatbot for Kids

Designed and developed a Flutter-based AI chatbot tailored for Hebrew-speaking children, combining fun and educational experiences in a safe environment. Integrated with the OpenAI GPT API to generate conversational responses, alongside a custom content filtering system to block inappropriate or unsafe language. Architected a complete user flow including screens, onboarding, real-time chat, and storage for message history.

EDUCATION

Full Stack Development – John Bryce

Completed an intensive, hands-on training program covering web development. Gained proficiency in JavaScript, React, Node.js, Angular, PHP, SQL, and modern software engineering practices. Built full end-to-end applications as part of team and solo projects, following agile methodologies.

High School Diploma

Successfully completed 12 years of formal education with full matriculation.
